## Overview

For my project, I'll be creating a personal professional website to use for job applications in the future. Below is how I plan to meet all of the requirements.

**Website has 1 homepage and at least 3 subpages; the homepage and subpages have a horizontal menu that leads to the other pages.**

The homepage will be a basic overview of who I am and what my webpage is all about. It will include some fun get to know me stuff that you wouldn't get from a standard resume.

The subpages will be Projects, Resume, and Contact. The Projects page will have links and images from projects I've completed in different languages. The Resume page will have a PDF version of my resume as well as some more interesting formatting to show the same info. The Contact page will simply have all of my social media information and likely a submission form.

**The homepage has picture carousel animation**

This could be a fun way to show images of the several activities I do outside of work and school. Images of friends and fun activities seem like a good idea. Definitely makes the site seem more personable.

**Have a scroll box in one page. You can put anything inside the scroll box.**

This seems great for holding a resume PDF on that Resume page. I think I'll put this at the bottom of the resume page for those who want a standard PDF of a resume vs. something more fun like I plan to do.

**One page has unordered HTML list with several entries.**

My plan is to format both the Resume and Project pages as lists. I think this will be the easiest way to organize things for both.

**There is a button to download files (map to the farm, menu in the restaurant, a personal CV, etc.) The downloaded file can either open in the browser or download to the local computer**

Under the resume PDF in the scroll box, I'd like to include a download button to actually allow for people to get the PDF version and save it from the Resume page..

**There is a link that you can click and leads to outside webpages (linkedin, yelp, email, etc.)**

This will go on the Contact page and will include links to my LinkedIn, Twitter, Git, Wolfram Community, and other places where I house projects. Email I will try to do as a form submission, but may default to button link similar to these.

## **Conclusion**

I'm sure I'll come to other things I want to add along the way and will probably continue to edit and add formatting along the way to better style this. I believe for now my goal will be to create a basic outline and a very simple style based off what I've learned in CS290 then take it a step further over the next few months by finding templates and other interesting formats to further spice up the look of it.
